Beginning Linux Programming By Neil Matthew, Richard Stones

Beginning Linux Programming, Fourth Edition continues its unique approach to teaching UNIX programming in a simple and structured way on the Linux platform. Through the use of detailed and realistic examples, students learn by doing, and are able to move from being a Linux beginner to creating custom applications in Linux. The book introduces fundamental concepts beginning with the basics of writing Unix programs in C, and including material on basic system calls, file I/O, interprocess communication (for getting programs to work together), and shell programming. Parallel to this, the book introduces the toolkits and libraries for working with user interfaces, from simpler terminal mode applications to X and GTK+ for graphical user interfaces. Advanced topics are covered in detail such as processes, pipes, semaphores, socket programming, using MySQL, writing applications for the GNOME or the KDE desktop, writing device drivers, POSIX Threads, and kernel programming for the latest Linux Kernel.

Editorial Review

From the Back Cover

Beginning Linux® Programming 4th Edition

Building on the success of its previous editions, this must-have guide continues its popular tutorial approach and brings you a straightforward introduction to developing programs for Linux and other UNIX-style operating systems. The author duo of experienced Linux programmers covers a wide range of topics to help you learn more about what Linux has to offer so you can maximize your programming time and your use of the Linux system.

You'll progress from the basics of compiling programs, linking to libraries, and dealing with terminal input and output to more advanced subjects such as writing applications for the GNOME® and KDE® environments, storing data using MySQL®, and debugging. As each topic is covered, the authors introduce an appropriate programming theory and then illustrate it with practical examples, clear explanations, and a step-by-step approach with the intent that you will learn by doing. You'll quickly evolve from being a Linux beginner to confidently creating custom applications in Linux.

What you will learn from this book

- How to use the standard Linux C libraries and other facilities
- Ways to make the most of the standard Linux development tools
- Tips on basic system calls, file I/O, interprocess communication, and shell programming
- How to build graphical user interfaces using the GTK+ or Qt toolkits
- Using sockets to support TCP/IP networking to different machines
- How to write programs that will work on different distributions of Linux

Who this book is for

This book is for programmers and developers who want to increase their skill level using Linux. Experience in C and/or C++ programming is helpful.

Wrox Beginning guides are crafted to make learning programming languages and technologies easier than you think, providing a structured, tutorial format that will guide you through all the techniques involved.

About the Author

Neil Matthew has been interested in and has programmed computers since 1974. A mathematics graduate from the University of Nottingham, Neil is just plain keen on programming languages and likes to explore new ways of solving computing problems. He's written systems to program in BCPL, FP (Functional Programming), Lisp, Prolog, and a structured BASIC. He even wrote a 6502 microprocessor emulator to run BBC microcomputer programs on UNIX systems. In terms of UNIX experience, Neil has used almost every flavor since the late 1970s, including BSD UNIX, AT&T System V, Sun Solaris, IBM AIX, many others, and of course Linux. He can claim to have been using Linux since August 1993 when he acquired a floppy disk distribution of Soft Landing (SLS) from Canada, with kernel version 0.99.11. He's used Linux-based computers for hacking C, C++, Icon, Prolog, Tcl, and Java at home and at work. All of Neil's "home" projects are developed using Linux. He says Linux is much easier because it supports quite a lot of features from other systems, so that both BSD- and System V-targeted programs will generally compile with little or

no change. Neil is currently working as an Enterprise Architect specializing in IT strategy at Celesio AG. He has a background in technical consultancy, software development techniques, and quality assurance. Neil has also programmed in C and C++ for real-time embedded systems.

Rick Stones started programming at school (more years ago than he cares to remember) on a 6502-powered BBC micro, which, with the help of a few spare parts, continued to function for the next 15 years. He graduated from Nottingham University with a degree in Electronic Engineering, but decided software was more fun. Over the years he has worked for a variety of companies, from the very small with just a dozen employees, to the very large, including the IT services giant EDS. Along the way he has worked on a range of projects, from real-time communications to accounting systems, to very large help desk systems. He is currently working as an IT architect, acting as a technical authority on various major projects for a large pan-European company. A bit of a programming linguist, he has programmed in various assemblers, a rather neat proprietary telecommunications language called SL-1, some FORTRAN, Pascal, Perl, SQL, and smidgeons of Python and C++, as well as C. (Under duress he even admits that he was once reasonably proficient in Visual Basic, but tries not to advertise this aberration.)

Users Review

From reader reviews:

Steven Bemis:

Have you spare time for any day? What do you do when you have a lot more or little spare time? Yeah, you can choose the suitable activity for spend your time. Any person spent their particular spare time to take a stroll, shopping, or went to often the Mall. How about open as well as read a book allowed Beginning Linux Programming? Maybe it is to be best activity for you. You understand beside you can spend your time with your favorite's book, you can smarter than before. Do you agree with it has the opinion or you have some other opinion?

Carolina Jones:

In this 21st hundred years, people become competitive in every single way. By being competitive now, people have do something to make all of them survives, being in the middle of the crowded place and notice by surrounding. One thing that at times many people have underestimated it for a while is reading. Yeah, by reading a book your ability to survive boost then having chance to stand than other is high. For you personally who want to start reading any book, we give you this kind of Beginning Linux Programming book as beginner and daily reading reserve. Why, because this book is greater than just a book.

Neil Owens:

People live in this new moment of lifestyle always try to and must have the time or they will get lot of stress from both lifestyle and work. So , if we ask do people have extra time, we will say absolutely without a doubt. People is human not only a robot. Then we question again, what kind of activity are you experiencing when the spare time coming to an individual of course your answer may unlimited right. Then ever try this one, reading guides. It can be your alternative throughout spending your spare time, the particular book you have read is Beginning Linux Programming.

Samuel Ware:

Playing with family in a very park, coming to see the marine world or hanging out with friends is thing that usually you have done when you have spare time, subsequently why you don't try thing that really opposite from that. 1 activity that make you not sense tired but still relaxing, trilling like on roller coaster you have been ride on and with addition associated with. Even you love Beginning Linux Programming, you may enjoy both. It is great combination right, you still wish to miss it? What kind of hang type is it? Oh can happen its mind hangout men. What? Still don't understand it, oh come on its referred to as reading friends.
