## The Self-Made Tapestry: Pattern Formation in Nature By Philip Ball

For centuries, scientists have struggled to understand the origins of the patterns and forms found in nature. Now, in this lucid and accessibly written book, Philip Ball applies state-of-the-art scientific understanding from the fields of biology, chemistry, geology, physics, and mathematics to these ancient mysteries, revealing how nature's seemingly complex patterns originate in simple physical laws.

Tracing the history of scientific thought about natural patterns, Ball shows how common presumptions--for example, that complex form must be guided by some intelligence or that form always follows function--are erroneous and continue to mislead scientists today. He investigates specific patterns in depth, revealing that these designs are self-organized and that simple, local interactions between component parts produce motifs like spots, stripes, branches, and honeycombs. In the process, he examines the mysterious phenomenon of symmetry and why it appears--and breaks--in similar ways in different systems. Finally, he attempts to answer this profound question: why are some patterns universal? Illustrations throughout the text, many in full color, beautifully illuminate Ball's ideas.

### Editorial Review

#### Amazon.com Review

Seashells are often spirals, just like water going down the drain. There *must* be a connection, right? Our intuition scoffs at such a notion, but maybe they are related, writes *Nature* editor Philip Ball in *The Self-Made Tapestry: Pattern Formation in Nature*. This deep, beautiful exploration of the recurring patterns that we find both in the living and inanimate worlds will change how you think about everything from evolution to earthquakes. Not by any means a simple book, it is still completely engaging; even the occasional forays into mathematics and the abstractions of hydrodynamics are endurable, tucked as they are between Ball's bright prose and his hundreds of carefully selected illustrations.

When speaking of the living world, Ball seeks to go beyond the theory of natural selection, which explains *why* we see certain characteristics (height, shape, camouflage), to find mechanisms that can explain *how* such characteristics come to be. Again, this is no easy task, but for those willing to follow his discussion, the elegance of nature is laid out in zebras' stripes, ivy leaves, and butterfly wings. Moving on to find the same patterns at work in the clouds of Jupiter and the cracks in the San Andreas fault give strength to the feeling that there are self-composing structures that guide everything in the universe toward a kind of order. *The Self-Made Tapestry* is a challenging look at the biggest issues in science, and well worth a thorough read. --  
*Rob Lightner*

#### From Publishers Weekly

Most people?including most scientists?take it as a given that the appearance of complex patterns implies conscious planning on the part of an intelligent agent or, in the case of such patterns in the biological world, the stringent application of the forces of natural selection. Ball (Designing the Molecular World) challenges these assumptions directly, documenting the counterintuitive idea that the operation of simple physical laws often yields complex and beautiful, but wholly natural, patterns. Ball's range is quite impressive. He discusses pattern formation on the hides of zebras, giraffes and leopards; the creation of honeycombs by bees; the uncanny similarities between branching patterns in plants and mineral dendrites of magnesium oxide. Ball also demonstrates how the same physical laws can operate on dramatically different scales: the same pattern of wave propagation has been found both in newly fertilized frog eggs and in nascent spiral galaxies. Despite fascinating material such as that, Ball's text is highly technical and often abstruse?so much so that it may prove inaccessible to most nonscientists?other than the comprehensible captions on the more than 400 photographs and line drawings (24 in color), that is, which make this a book that's at least worthy browsing for general readers.

#### From Library Journal

As an editor at *Nature*, Ball (Made To Measure: New Materials for the 21st Century, LJ 11/15/97) is in an excellent position to take an interdisciplinary look at the patterns in the world around us, be they formed by the elements, flora, fauna, or humans. The underlying physical constraints that bring order out of randomness are explored without the burden of lengthy mathematical formulae. Ball shows us how similar patterns can arise in remarkably different situations and how slight changes in variables produce a startling array of patterns within the same systems. Though other books on fractals and chaos theory share similar topics, this work does a remarkable job of presenting the hows and whys. From how the leopard got its spots to how Jupiter acquired its own spot, this readable and well-illustrated book has answers. A series of do-it-yourself demonstrations is presented in seven appendixes. Recommended for larger public and academic libraries. AWade Lee, Univ. of Toledo Libs., OH

## Users Review

### From reader reviews:

#### **Mary Rohan:**

Are you kind of busy person, only have 10 or even 15 minute in your moment to upgrading your mind skill or thinking skill possibly analytical thinking? Then you are having problem with the book compared to can satisfy your short space of time to read it because this all time you only find e-book that need more time to be go through. The Self-Made Tapestry: Pattern Formation in Nature can be your answer mainly because it can be read by an individual who have those short extra time problems.

#### **Michael Ramsey:**

Beside this kind of The Self-Made Tapestry: Pattern Formation in Nature in your phone, it might give you a way to get closer to the new knowledge or data. The information and the knowledge you can got here is fresh through the oven so don't become worry if you feel like an previous people live in narrow town. It is good thing to have The Self-Made Tapestry: Pattern Formation in Nature because this book offers to you readable information. Do you at times have book but you rarely get what it's facts concerning. Oh come on, that will not happen if you have this with your hand. The Enjoyable blend here cannot be questionable, including treasuring beautiful island. Techniques you still want to miss the item? Find this book in addition to read it from today!

#### **Louise Guest:**

Is it anyone who having spare time then spend it whole day by watching television programs or just lying down on the bed? Do you need something totally new? This The Self-Made Tapestry: Pattern Formation in Nature can be the solution, oh how comes? The new book you know. You are thus out of date, spending your time by reading in this brand-new era is common not a nerd activity. So what these textbooks have than the others?

#### **Pamela Bost:**

What is your hobby? Have you heard that question when you got learners? We believe that that question was given by teacher on their students. Many kinds of hobby, Every individual has different hobby. And also you know that little person similar to reading or as reading become their hobby. You need to know that reading is very important in addition to book as to be the issue. Book is important thing to increase you knowledge, except your personal teacher or lecturer. You discover good news or update with regards to something by book. Amount types of books that can you take to be your object. One of them are these claims The Self-Made Tapestry: Pattern Formation in Nature.
