Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics) By Victor M. Panaretos

This textbook provides a coherent introduction to the main concepts and methods of one-parameter statistical inference. Intended for students of Mathematics taking their first course in Statistics, the focus is on Statistics for Mathematicians rather than on Mathematical Statistics. The goal is not to focus on the mathematical/theoretical aspects of the subject, but rather to provide an introduction to the subject tailored to the mindset and tastes of Mathematics students, who are sometimes turned off by the informal nature of Statistics courses. This book can be used as the basis for an elementary semester-long first course on Statistics with a firm sense of direction that does not sacrifice rigor. The deeper goal of the text is to attract the attention of promising Mathematics students.

Editorial Review

Review

“The author aims to present a few topics that he considers important, striking an excellent balance between the need to be concise and to include all of the fundamental methods. ... this is a valuable book for both mathematics students and applies researchers, and fills a gap in the literature by providing a rigorous and modern introduction to the basic theory of statistics.” (Marco Bee, Mathematical Reviews, February, 2017)

“Panaretos ... provides a logical, thorough mathematical representation for a minimally selected number of topics in one-parameter statistical inference. ... textbook is appropriate for those students, regardless of their disciplines, interested in learning about or becoming more familiarized with the essence of statistics in a formal and eloquent mathematical framework The author offers an extensive list of entry-level and advanced textbooks in mathematical statistics for further reading Summing Up: Recommended. Upper-division undergraduates through researchers and faculty.” (S.-T. Kim, Choice, Vol. 54 (5), January, 2017)

From the Back Cover

This textbook provides a coherent introduction to the main concepts and methods of one-parameter statistical inference. Intended for students of Mathematics taking their first course in Statistics, the focus is on Statistics for Mathematicians rather than on Mathematical Statistics. The goal is not to focus on the mathematical/theoretical aspects of the subject, but rather to provide an introduction to the subject tailored to the mindset and tastes of Mathematics students, who are sometimes turned off by the informal nature of Statistics courses. This book can be used as the basis for an elementary semester-long first course on Statistics with a firm sense of direction that does not sacrifice rigor. The deeper goal of the text is to attract the attention of promising Mathematics students.

About the Author

Victor M. Panaretos is Associate Professor of Mathematical Statistics at the Department of Mathematics of the EPFL. He completed his undergraduate studies in Mathematics and Statistics at the Athens University of Economics and Business and at Trinity College Dublin in 2003. He received a PhD in Statistics from the University of California at Berkeley in 2007, where he studied supported by an NSF Graduate Research Fellowship Award, and received the Erich L. Lehmann Award for an Outstanding Doctoral Dissertation in Theoretical Statistics. He joined the EPFL as an Assistant Professor in 2007 at the age of 24, as the youngest ever faculty of the institution, and was promoted to Associate Professor and tenured in 2013, again the youngest to ever do so. He is the recipient of an ERC Starting Grant Award and an Elected Member of the International Statistical Institute. He has given over 30 invited conference talks and 50 invited seminars. He has served as the Editor of Bernoulli

i News, and is an Associate Editor for the Annals of Applied Statistics, Biometrika, and the Electronic

Journal of Statistics. He is a member of the Publications Committee of the Bernoulli Society for Mathematical Statistics and Probability.

Users Review

From reader reviews:

Clarence Ross:

Book is to be different for every grade. Book for children until finally adult are different content. As we know that book is very important for all of us. The book Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics) was making you to know about other knowledge and of course you can take more information. It is very advantages for you. The book Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics) is not only giving you considerably more new information but also being your friend when you really feel bored. You can spend your own personal spend time to read your book. Try to make relationship with all the book Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics). You never truly feel lose out for everything when you read some books.

Bridget Chacon:

Spent a free a chance to be fun activity to perform! A lot of people spent their leisure time with their family, or all their friends. Usually they carrying out activity like watching television, likely to beach, or picnic within the park. They actually doing same thing every week. Do you feel it? Will you something different to fill your free time/ holiday? Could be reading a book may be option to fill your free of charge time/ holiday. The first thing that you ask may be what kinds of publication that you should read. If you want to test look for book, may be the reserve untitled Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics) can be great book to read. May be it could be best activity to you.

Michele Sexton:

Many people spending their time frame by playing outside having friends, fun activity along with family or just watching TV all day every day. You can have new activity to spend your whole day by reading a book. Ugh, think reading a book can actually hard because you have to use the book everywhere? It fine you can have the e-book, getting everywhere you want in your Touch screen phone. Like Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics) which is keeping the e-book version. So , why not try out this book? Let's observe.

Santiago Johnson:

As a pupil exactly feel bored for you to reading. If their teacher questioned them to go to the library or make summary for some reserve, they are complained. Just little students that has reading's internal or real their hobby. They just do what the educator want, like asked to go to the library. They go to right now there but nothing reading really. Any students feel that examining is not important, boring along with can't see colorful pictures on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this age, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore this Statistics for Mathematicians: A Rigorous First Course (Compact Textbooks in Mathematics) can make you truly feel more interested to read.
