A Man on the Moon By Andrew Chaikin

On the night of July 20, 1969, our world changed forever when two Americans, Neil Armstrong and Buzz Aldrin, walked on the moon. Now the greatest event of the twentieth century is magnificently retold through the eyes and ears of the people who were there. Based on the interviews with twentythree moon voyagers, as well as those who struggled to get the program moving, journalist Andrew Chaikin conveys every aspect of the missions with breathtaking immediacy: from the rush of liftoff, to the heartstopping lunar touchdown, to the final hurdle of reentry.

Editorial Review

Amazon.com Review

A decade in the making, this book is based on hundreds of hours of in-depth interviews with each of the twenty-four moon voyagers, as well as those who contributed their brain power, training and teamwork on Earth. In his preface Chaikin writes, "We touched the face of another world and became a people without limits."

What follows are thrilling accounts of such remarkable experiences as the rush of a liftoff, the heart-stopping touchdown on the moon, the final hurdle of re-entry, competition for a seat on a moon flight, the tragic spacecraft fire, and the search for clues to the origin of the solar system on the slopes of lunar mountains. -- *Therese Littleton*

From Publishers Weekly

Scheduled to coincide with the 25th anniversary of the first lunar landing on July 20, 1969, this chronicle offers a comprehensive, often penetrating look at NASA's Apollo program. Originating in 1961, when President John Kennedy told Congress that the U.S. should attempt to land a man on the moon "before this decade is out," the program's last mission ended in December, 1972, with the splashdown of Apollo 17.

Diary-like reports mix with first- and third-person accounts as Chaikin, an editor at *Sky & Telescope* magazine, delivers a chronological view of the missions and those who planned and flew them. Focusing closely on the Apollo astronauts, including Buzz Aldrin, Pete Conrad and Neil Armstrong, Chaikin gives his topic a sense of immediacy. But his treatment, lengthy as it is, reads more like an extended magazine article. Missing is a view of Apollo in a wider context, one that captures the mythos of our efforts to land on the moon. 40,000 first printing.

From Library Journal

Science writer Chaikin spent eight years interviewing dozens of NASA flight controllers, engineers, technicians, and especially all 23 surviving astronauts who flew missions to the moon during the Apollo program. Fleshed out with never-before-published conversations taken from declassified on-board voice recorders, his book provides a vivid account of the first era of manned lunar exploration. Published to coincide with the 25th anniversary of the first landing, Chaikin's insightful telling refreshes the oft-repeated stories of these pioneering flights with new details, anecdotes, and reflections that convey what the experience was like for the astronauts. He also shows that, paradoxically for one of the most intensively reported stories of its time, how little we really understood what happened on that July night in 1969. Reminiscent of Charles Murray and Catherine Bly Cox's superb *Apollo: The Race to the Moon* (LJ 6/15/89), this is a highly recommended purchase for both public and academic libraries.
