## Clinical Research Methods in Speech-Language Pathology and Audiology

By David Irwin, Mary Pannbacker, Norman J. Lass

Written for graduate students and practicing clinicians, this textbook, now in its second edition, provides comprehensive knowledge about understanding and conducting clinical research. Specifically, readers will learn to understand the strengths and weaknesses of different research methodologies, apply the results of research to clinical practice and decision making, and understand the importance of research ethics.

Importantly, this is the only book to take into account qualitative research and evidence-based practice, and to provide a detailed discussion of research ethics. For the second edition, the authors have updated and expanded the content. New and expanded topics include:

- HIPAA and its impact on research
- Knowledge and skills needed for evidence-based research
- Application of revised Codes of Ethics to research: AAA (2011) and ASHA (2010)
- Comparison of ASHA (2005) and (2007) levels of evidence
- Chronology of research misconduct in the United States
- Organizational support for evidence-based practice
- Framing questions: PICO and PESICO
- Research utilization
- Information literacy
- Use of social networking as a research database
- Using single-subject design for ASD subjects

In addition, the chapter on research grants includes an updated and expanded list of potential funding sources for grant-seeking purposes, both online and text-based, for federal, foundation, association, and corporate research grants.

With its updated content and many new features, *Clinical Research Methods in speech-Language Pathology and Audiology, Second Edition* is an excellent choice for students and professionals seeking to increase their knowledge of research in communication sciences and disorders.

### Editorial Review

#### Review

"This is an excellent resource for anyone interested in research. The inclusion of information on ethics, grant writing, treatment outcomes, and evidence-based practice as well as the more standard information on design and statistics set this apart from other research design books. The text is well organized, and the writing is clear and understandable. It would make an excellent textbook for a research design course. [Refers to First Edition] --Sheila V. Stager, BSc, MS, MS, PhD (Voice Treatment Center), Doody's Review Service, (2008)

...While there are a number of very good texts that are written for our discipline most of which are referenced in this book no one text I have used has covered the broad number of topics I want students to learn in my course. That was true until I was able to review Clinical Research Methods in Speech-Language Pathology and Audiology (2nd ed.) by Irwin, Pannbacker, and Lass, a text I had not previously examined. Clinical Research Methods ... contains 14 well-written and well-referenced chapters. The text is easy to read, even for students encountering these concepts for the first time. Chapter topics cover the gamut from an introduction to research to the evaluation of tests and treatments to coverage of issues related to research proposals and grants. The authors appear to have written the text both for students (future clinicians) who need to learn how to evaluate research in the discipline in order to apply it to practice, and for potential investigators. These dual purposes are difficult to balance, but Irwin, Pannbacker, and Lass do a fine job in maintaining clear explanations and providing a depth of content important for both audiences. The formatting and style of each chapter are especially helpful for readers.... Some chapters stand out as particular assets to users: The chapter on research ethics is well-researched and thoughtful. The inclusion of a chapter on multimethod research may be ahead of publications in the field due to the apparent dearth of such studies in speech language pathology and audiology. Particularly helpful is the information contrasting narrative reviews, systematic reviews, and meta-analyses.... Clinical Research Methods in Speech-Language Pathology and Audiology (2nd ed.) by Irwin, Pannbacker, and Lass is a comprehensive introductory text written for students in communication disorders and for potential investigators. I recommend it for a graduate course in research methods because of its broad range of covered topics, helpful pedagogical features, and extensive references. This text will be on my book adoption order for next year!" --Gail B. Kempster, International Journal of Audiology (2014)

"This book is a comprehensive description of modern clinical research methods. It is primarily written with the student in mind and assumes little prior knowledge. However any audiologist returning to research after a break would benefit from it. If you just plan to contribute to the profession by doing a bit of research of a practical or enquiring kind, there is a lot in the book for you....

The book's main advantage over other research methods texts for the Australian Audiologist is the use of examples of research that are relevant to us. This makes it easier to engage with the concepts as they are presented. The text is highly structured with each chapter having an outline, learning objectives, introduction, content, summary, discussion questions and excellent references. The structure makes it highly suitable as a textbook for audiology courses. It is well written and clear in its explanations....

Overall, this is an excellent text, that it has come to a second edition alone highly recommends it. It is a complete, structured description of modern clinical research methods. It is highly recommended as preparation for anyone planning to do research of a primary or secondary kind or even if they just want to start reading a bit more of the literature in their field. It could easily be used as the basis for a course at an

undergraduate or post graduate level. But it is more- it is relevant to modern clinical practice and extremely encouraging and positive about the outlook for professions that get involved in research." --Chris Whitfeld, BSC, MA, AudiologyNow (2013)

#### About the Author

**Dr. David Irwin** has a doctorate in speech-language pathology from the University of Oklahoma Health Sciences Center. He is retired from Louisiana State University Health Sciences Center as Professor and Head of the Children's Center.

### Users Review

#### From reader reviews:

##### **Lonnie Bowers:**

Have you spare time for a day? What do you do when you have a lot more or little spare time? Yep, you can choose the suitable activity regarding spend your time. Any person spent their very own spare time to take a go walking, shopping, or went to often the Mall. How about open as well as read a book entitled Clinical Research Methods in Speech-Language Pathology and Audiology? Maybe it is to become best activity for you. You know beside you can spend your time with your favorite's book, you can cleverer than before. Do you agree with their opinion or you have various other opinion?

##### **Catherine Scott:**

The particular book Clinical Research Methods in Speech-Language Pathology and Audiology has a lot details on it. So when you read this book you can get a lot of help. The book was compiled by the very famous author. This article's author makes some research previous to write this book. That book very easy to read you may get the point easily after looking over this book.

##### **Elizabeth Ramsey:**

The reason why? Because this Clinical Research Methods in Speech-Language Pathology and Audiology is an ordinary book that the inside of the book waiting for you to snap it but latter it will jolt you with the secret this inside. Reading this book next to it was fantastic author who have written the book in such awesome way makes the content within easier to understand, entertaining approach but still convey the meaning totally. So, it is good for you for not hesitating having this ever again or you going to regret it. This book will give you a lot of advantages than the other book have got such as help improving your talent and your critical thinking method. So, still want to hesitate having that book? If I were being you I will go to the publication store hurriedly.

##### **Sebrina Knapp:**

What is your hobby? Have you heard that will question when you got students? We believe that that problem was given by teacher for their students. Many kinds of hobby, Everyone has different hobby. And you also know that little person just like reading or as studying become their hobby. You must know that reading is

very important in addition to book as to be the issue. Book is important thing to increase you knowledge, except your teacher or lecturer. You will find good news or update concerning something by book. Different categories of books that can you choose to use be your object. One of them is niagra Clinical Research Methods in Speech-Language Pathology and Audiology.
